

“In theory, it should be possible to write a local transport that proxies a connection between an ADB server and a device/emulator connected to/running on another machine. This hasn't been done yet though.”

transports

- abstracts the connection between the server and device
- handles simultaneous data transmission for multiple streams
- types
 - USB
 - TCP
 - Other?

"In theory, it should be possible to write a local transport that proxies a connection between an ADB server and a device/emulator connected to/running on another machine. This hasn't been done yet though."
